

PULSE eCommerce/EDI Integrator Eliminates Manual Keying of Customer Orders

This software eliminates manual keying of customer orders by automatically importing them from your e-commerce website, Shopify, text file, Amazon/Wayfair/Walmart, etc., Excel spreadsheet, and/or EDI service.

PULSE eCommerce/EDI works with your Macola® Progression, ES, or 10 software. It allows you to import and automatically create customer orders from your website, Shopify, Amazon, Wayfair, Yahoo, Walmart, text files, Excel spreadsheets, and/or EDI service. Your customers or sales reps can also now submit orders using Excel spreadsheets.

NEW optional feature: eCommerce/EDI Unattended version. Some customers want their customer orders imported in real time or do not want to rely on a staff member to periodically manually download files during the day. This new optional feature automatically downloads files, validates the data, and imports only the good orders into Macola®. An e-mail message is automatically sent if an order needs correction.

PULSE eCommerce/EDI can also transmit back tracking numbers, EDI Order Acknowledgments (855s), EDI Advance Shipping Notices (856s), EDI invoices (810s), and inventory levels. This allows your customers to track their orders and reduce calls to your office.

The screenshot shows the software interface with a top navigation bar containing buttons for 'Import Orders', 'Clear Screen', 'Button1', and 'Push Orders Into Macola'. Below this is a table with columns for 'Order Number', 'Order Date', 'Customer Number', and 'Customer Name'. The table contains two rows of sample data.

Order Number	Order Date	Customer Number	Customer Name
000000000100	6/25/2014	000000000100	
000000000200	6/25/2014	000000000200	

WHO NEEDS THE PULSE eCommerce/EDI SOFTWARE?

We totally eliminate manual keying. We import customer orders directly into Macola® from:

- Your company eCommerce web site(s),
- Text files,
- EDI services,
- Excel spreadsheets,
- Shopify, Amazon/Wayfair/Walmart/Yahoo, etc.

HOW DOES IT WORK?

- Step 1 – PULSE eCommerce reads the files from your eCommerce website or any other external source (ex., SPS Commerce EDI) and can be in any format (ex., text, Excel spreadsheet, XML). Order data is validated in real time. Errors are highlighted in red.
- Step 2 - If an order has errors, you click on it to see the details (see the screen above) and correct the error before pushing the order into Macola®.
- Step 3 - If there are no errors, click the 'Push Orders into Macola®' button to create customer orders.
- Step 4 – After each customer order is shipped, our software can export and transmit a file of tracking numbers.
- Using the Event Manager software, you can optionally send an e-mail notification to your customer service personnel of incoming orders or an acknowledgment back to your customer.

KEY FEATURES and BENEFITS

- Tedious keying and proofreading are eliminated.
- You will be able to manage your customer orders better.
- We provide unlimited phone support.

WHAT DOES IT COST AND WHAT IS INCLUDED?

Please refer to our price list. Customizations to meet your unique needs are invoiced on a time-and-materials basis. Our annual maintenance and support fee includes unlimited ongoing training, telephone support, and software updates.
