

Import Utility for POP Production Orders

Use Excel to Import Macola POP Orders & Release Them

Allows You to Import & Release Mass Quantities of Orders

WHO NEEDS THIS SOFTWARE?

This utility is for you if you create mass quantities of Macola® Production Order Processing (POP) orders and later release them. It eliminates the hours it would take to manually key and release them one by one.

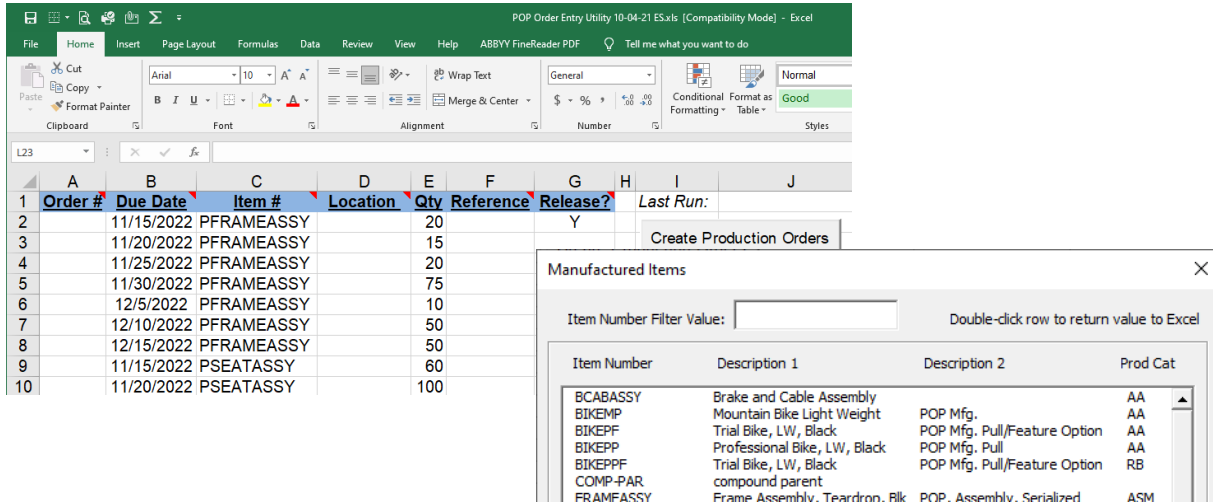

KEY FEATURES and BENEFITS

- Use familiar Excel to import orders
- Eliminates tedious manual keying of POP orders
- We include unlimited phone support from our dedicated support desk
- Works with all versions of Macola® (Progression, ES, and 10)

HOW DOES IT WORK?

Using familiar Excel with powerful Visual Basic programming, our utility imports and releases POP production orders.

Step 1 – Use our Excel import template to enter each item number, due date, and quantity (see sample screenshot below). You can key in the item numbers or double-click on the cell to display the lookup box. The utility can optionally assign the order number and location and release it.

Step 2 – Use our Excel template to release each order (see screenshot below).

Step 3 – Use the PULSE Dashboard to verify results (see screenshot below).
